

# Fire TV Web App Starter Kit

## Theming Guide

# Viewing & Navigating the Application (Chrome Browser)

## 1. Console Drawer Icon

Click the icon to toggle the dev-tools drawer

## 2. Console Drawer/Emulation Tab

Make sure the emulation tab is selected

## 3. Model Drop Down

There are a number of models to choose from, but there is NOT a selection for FireTV, but we can enter the device resolution manually

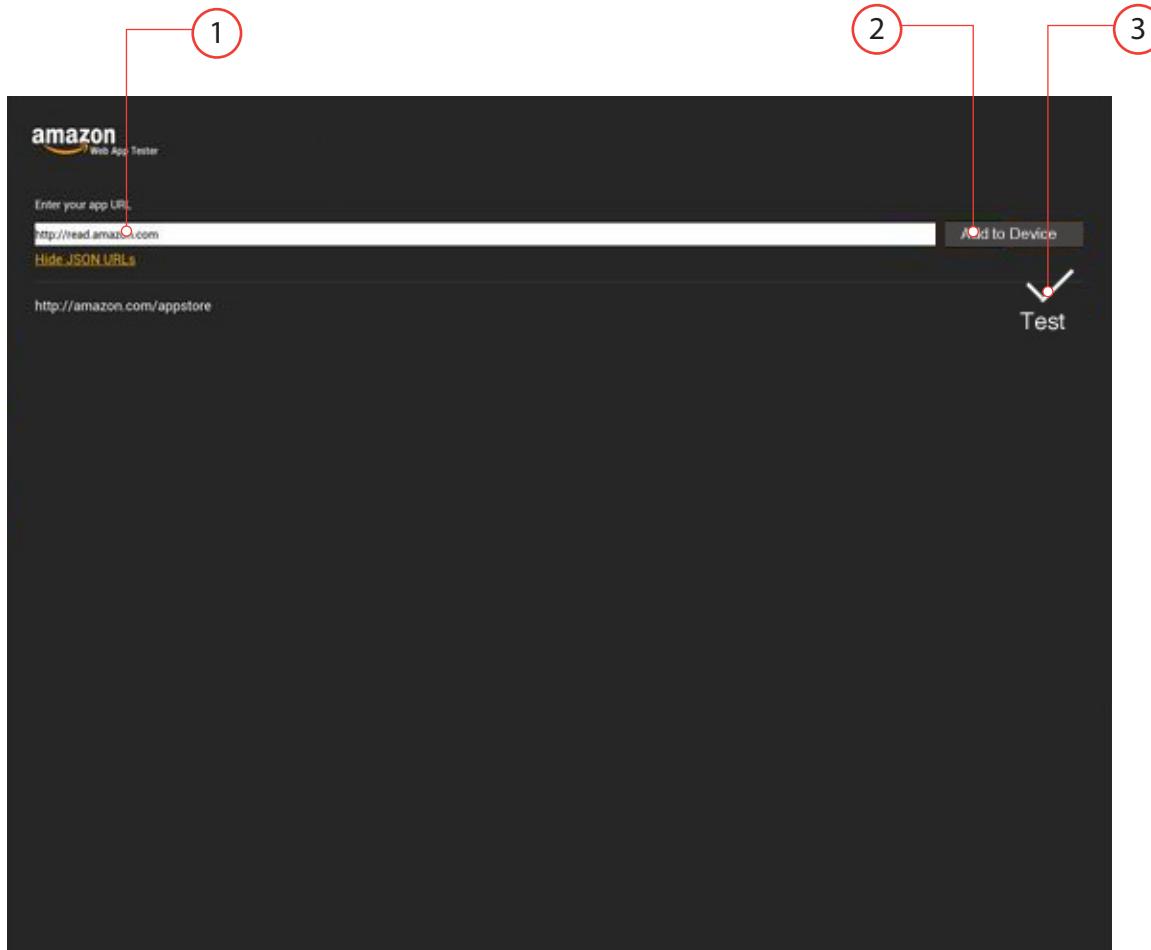

## 4. Resolution Input Boxes

The FireTV resolution is 1920 x 1080, so set those in the two input boxes to emulate the FireTV screen resolution.

## 5. Navigation

Use the arrow keys on your keyboard to navigate the page. Use the "Return" or "Enter" key to make a selection.

# Viewing the Application (Web App Tester in Appstore on FireTV)

## 1. URL Input Box

Enter the URL for your app in the input

## 2. Add to Device Button

Add the URL and it will appear in the list below the input box

## 3. Test Button

Select the test button to view your app

## 4. Navigation

Use the bundled Fire TV or Fire TV Stick remote for navigation

# Theming Information

## Web App Starter Kit Template

The template uses the SASS extention library for the CSS used in the application

## SASS

SASS is a CSS extension library, which is compiled to into CSS. If you are not familiar with SASS please check out <http://sass-lang.com/> for more information.

## Files

SASS files are recognized by a 'scss' file extension. The application includes 4 of these files by default (One main file and three includes)

- firetv.scss : the main scss file that will pull in the other sass files.
- \_common.scss : this file contains the CSS rules for the entire application.
- \_mixins.scss : these are variables used to shorthand vendor prefixes in the rules in our `_common.scss` file.
- \_variables.scss : the file that contains variables for fonts and colors used in the application theming.

NOTE : All files that are used as sass includes must begin with an underscore.

## Variables

For changing colors and fonts in your app you will make changes to the variables in the `_variables.scss` file.

Things to note :

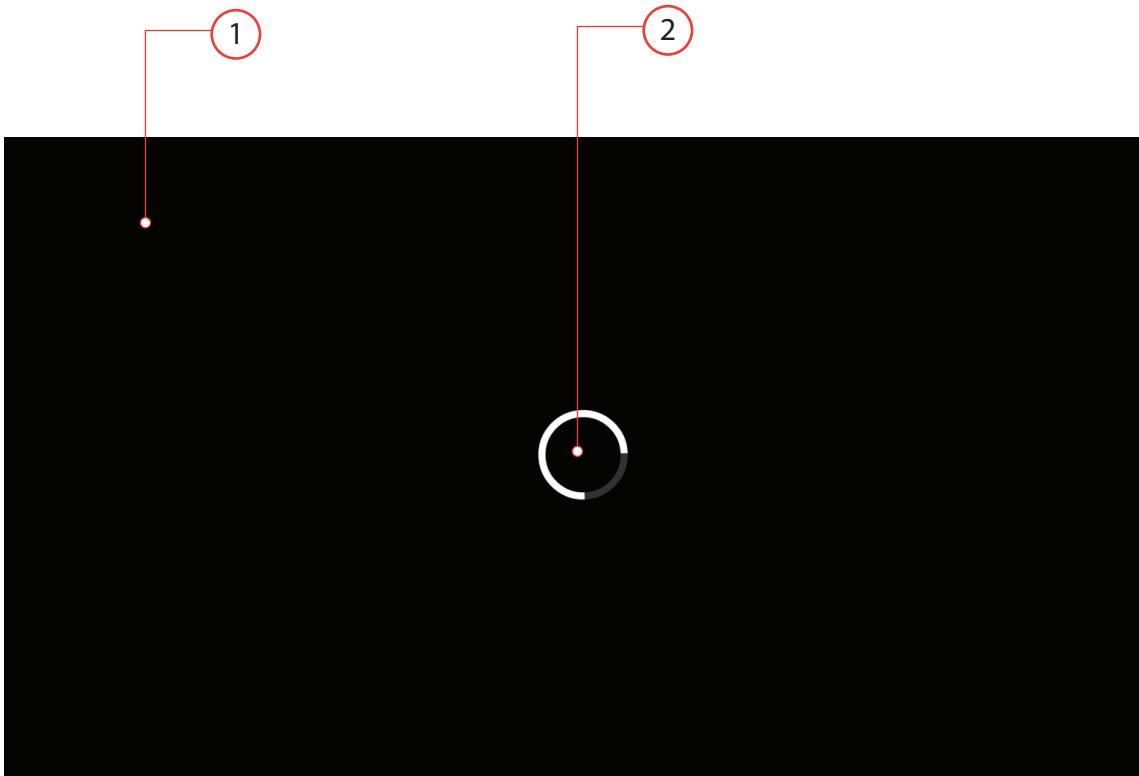

- All variables in SASS begin with a \$.
- All variables referred to in this document are found in the `_variables.scss` file.

## CSS Styles

The following pages show the elements of the app that can be themed and the classname for the element, which can be found in the `_common.scss` file. When looking at a class you will see that some of the styles are set with variables (i.e. colors, fonts). You can make broader changes to your app by adjusting the variables as opposed to individual CSS styles.

*Some elements may not have a style applied (i.e. bold font-weight). This just means that it is not part of the default style, but it can still be applied to an element if desired.*

# Application Spinner

## 1. App Overlay

*.app-overlay-container*

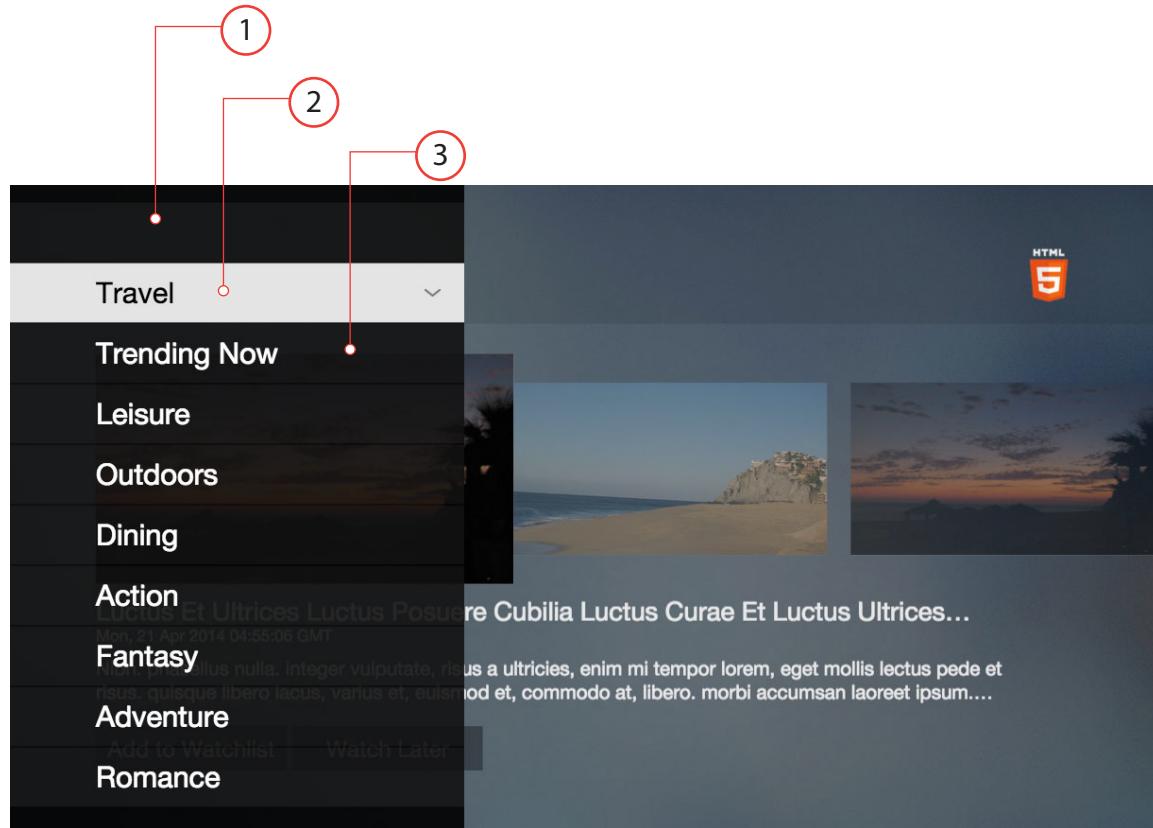

- background (image, color)

## 2. Loading Spinner

*.content-load-spinner*

- background color

# Left Navigation Menu

**Left Navigation Character Limit :** The default character limit of Left Navigation Menu items is 24 characters. This is determined by the width of the menu and the default font-size of the items. Items containing more than 24 characters may be truncated and appended with an ellipsis (...)

## 1. Left Navigation Menu

*.leftnav-menu-list*

- background color

## 2. Left Navigation Menu Highlighted Item

*.leftnav-list-item-selected*

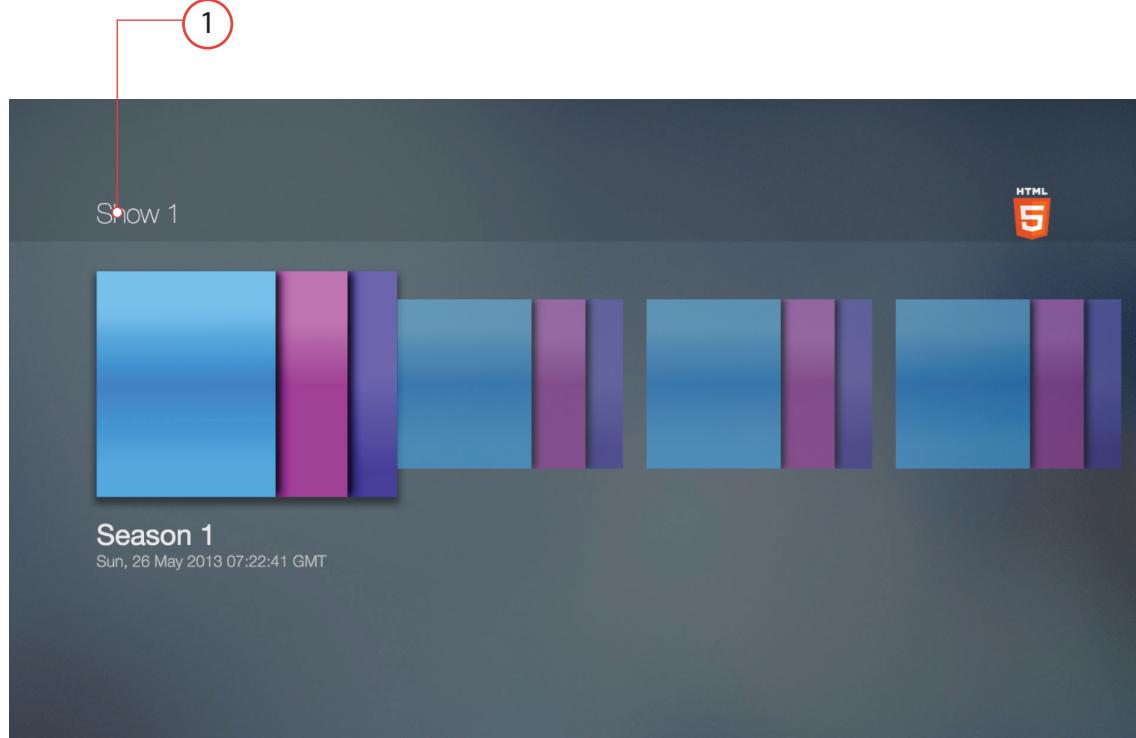

- background color
- font (family, color, size, weight, style)

## 3. Left Navigation Menu Static Item

*.leftnav-list-item-static*

- background color
- font (family, color, size, weight, style)

# Subcategory Menu

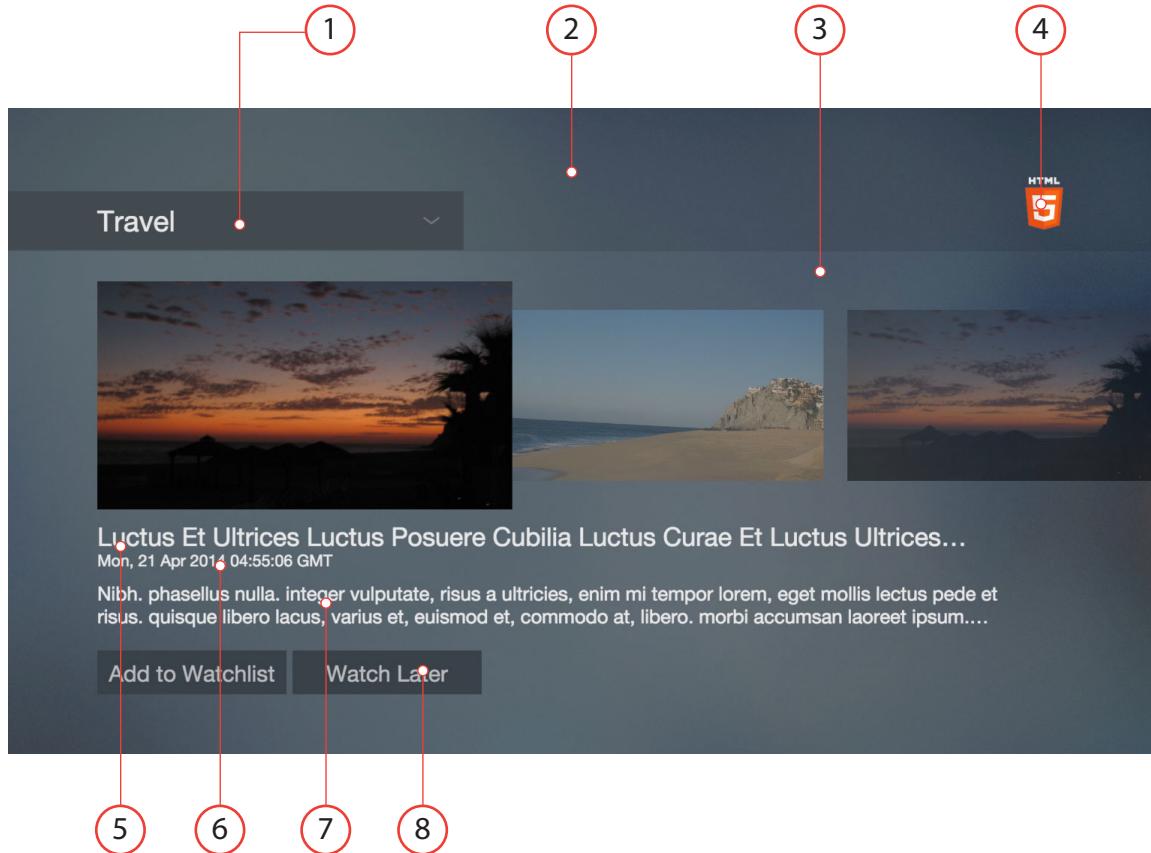

## 1. Subcategory Header

*.subcat-header*

- background color
- font (family, color, size, weight, style)

# Main Application

## 1. Leftnav chosen item

*.leftnav-list-item-chosen*

- background color
- font (family, color, size)
- font style (bold, italic)

## 2. Application Header Bar

*.app-top-bar*

- background color

## 3. Application

*.app-main-container*

- background (color or image)

## 4. Logo (default size = 222px x 95px)

- image = img\_logo.png (in index.html)

## 5, 6, 7. Content Title, Date and Description

*.one-D-summary-title*

*.one-D-summary-pubdate*

*.one-D-summary-description*

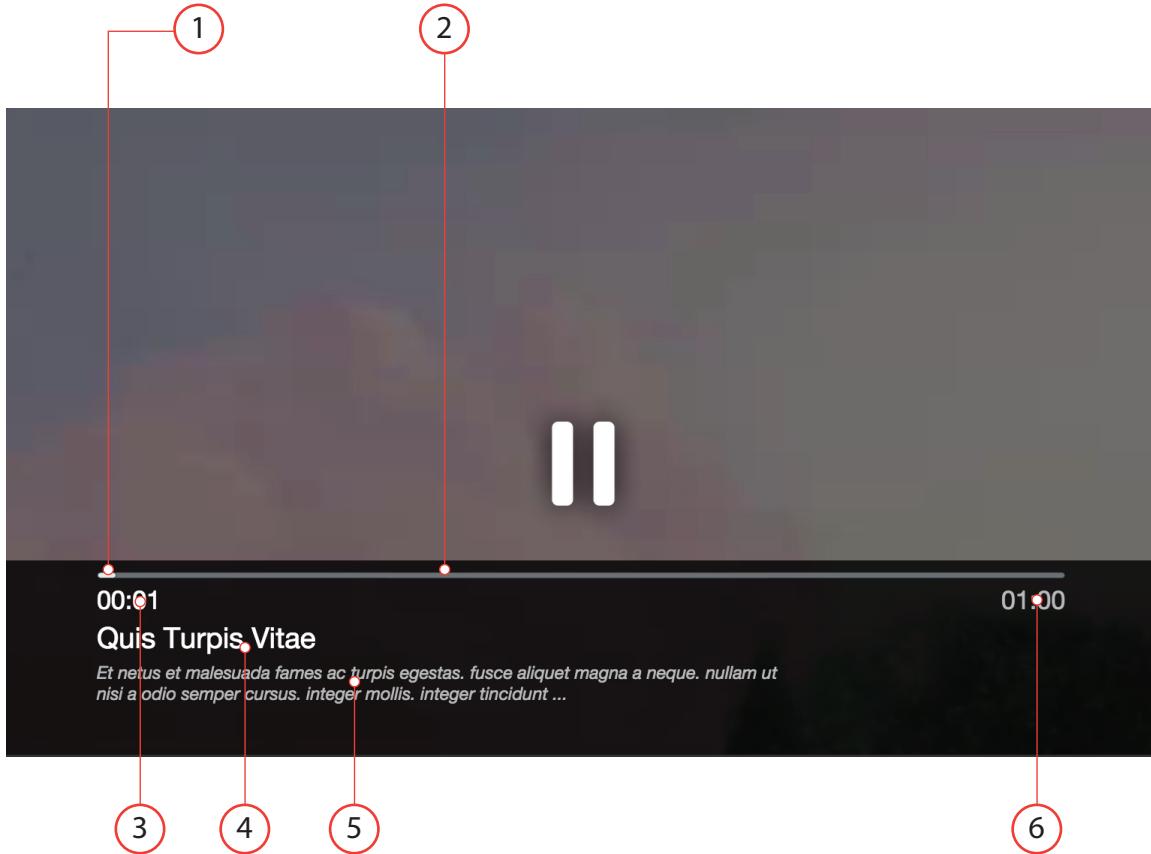

- background color
- font (family, color, size)
- font style (bold, italic)

## 8. Buttons

*.detail-item-button-static*

- background color
- font (family, color, size, bold, italic)
- border (color, width, style)

# Video Custom Controls

## 1. Video Timeline Indicator

- .player-controls-timeline-playhead*
- background color
- border color

## 2. Video Timeline

- .player-controls-timeline*
- background color
- border color

## 3. Video Current Time

- .player-controls-timestamp-curtime*
- font (family, color, size)
- font style (bold, italic)

## 4. Video Title

- .player-controls-content-title*
- font (family, color, size)
- font style (bold, italic)

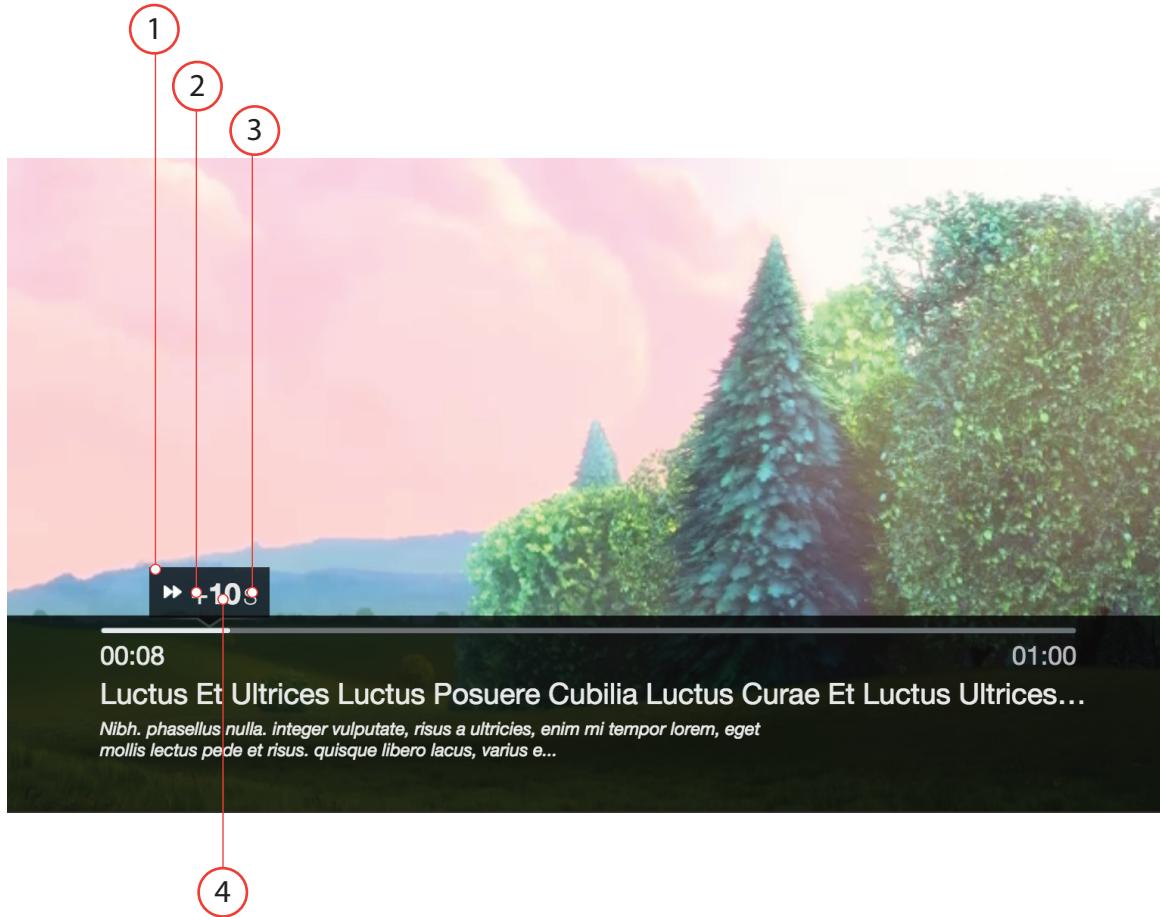

## 5. Video Description

- .player-controls-content-subtitle*
- font (family, color, size)
- font style (bold, italic)

## 6. Video Total Time

- .player-controls-timestamp-totaltime*
- font (family, color, size)
- font style (bold, italic)

# Video Custom Controls - Skip

## 1. Skip Indicator Box

- .player-controls-skip-indicator*
- background, background-color

## 2. Skip Symbol

- .player-controls-skip-symbol*
- font (family, color, size)
- font style (bold, italic)

## 3. Skip Text

- .player-controls-skip-text*
- font (family, color, size)
- font style (bold, italic)

## 4. Skip Number

- .player-controls-skip-number*
- font (family, color, size)
- font style (bold, italic)
